

## *Meeting Minutes 8*

---

Date: 10/13/11

Sponsor Meeting: start 3:00pm

- Started discussing concepts with Todd and other GE employees
- Were told that we may get less effective sensors just to prove our concept works and then recommend the right sensor for actual use on the field in the final report
- App may have the ability to use multiple sensors simultaneously (above and beyond)
- Lenard will be sending us sample compressor data with set up
- Contact manufacturers for sample transducers
- Were told to assume there will be no internet access on site
- Possibly fabricate clamps to shorten set up time of sensors
- Compressor wall thickness ranges from 4 -6- 8 inches
- Email Lenard with further compressor questions
- Todd told us to be sure to specify any compatibility issues with the application i.e. any minimum API level requirements
- Asked about the disclosure documents mentioned in previous advisor meeting, Todd said they will get that to us soon
