

Meeting with Dr. Frank

October 30, 2014

- Went over status of the project
 - Have ordered parts
 - Midterm paper almost complete
- Spoke about Midterm II presentation
- Possible design issues
 - Think we have most covered but will observe what other problems arise during prototype testing
- Questions on how to minimize the amount of wires running out of burrow from the rover
 - Should we use canbus or R232?
 - Distance they reach depends on the speed it is running at
 - Speed of propagation will slow down
 - Canbus most likely simpler than USB but more complex than R232
