Sponsor

Objective

The objective of this project is to develop a tool that informs the design of quadrupedal robots using the knowledge gained from previously built CISCOR robots.

ET-Quad

RHex

Minitaur

University

Key Goals

Develop a tool to assist new quadrupedal robot development

Return critical parameter values

Reduce development time

Act as a database of knowledge for robot development

Assumptions

Complete by April 2023

Using MathWorks Software

Focus on 5-bar Quadrupedal Robots

Stakeholders

CISCOR

- Dr. Shayne McConomy
- Dr. Jonathon Clark

Stakeholders

CISCOR

- Dr. Shayne McConomy
- Dr. Jonathon Clark

FAMU-FSU College of Engineering

- Dr. Christian Hubicki (Robotics Expert)
- Dr. Patrick Hollis (Modeling and Simulations Expert)

Stakeholders

CISCOR

- Dr. Shayne McConomy
- Dr. Jonathon Clark

FAMU-FSU College of Engineering

- Dr. Christian Hubicki (Robotics Expert)
- Dr. Patrick Hollis (Modeling and Simulations Expert)

General Stakeholders

- Other educational institutions

Current Work

Relevant Readings in Robotics and Vehicle Design

- *Dynamic Similarity and Scaling for the Design of Dynamical Legged Robots* – Bruce Miller and Jonathan Clark
- *Hybrid Low-Order Modeling for Conceptual Vehicle Design* – Robert Mau

Coaxial 5-bar

General Classification

Quadruped

Additional Needs

Use previous robot performance data

Produce visual comparison graphic for critical targets

Customer Wants

Produce Bill of Materials for developed model

Develop simple parametric models

Utilize physics engine for robot simulation
