Objective

The objective of this project is to develop a tool that aids in the design of quadrupedal robots using the knowledge gained from previously built CISCOR robots.

University

Key Goals

Develop a tool to assist new quadrupedal robot development

Return critical parameter values

Reduce development time

Act as a database of knowledge for robot development

Racing Car Game
Selection

Robot characteristics selected like Mario Kart components with visual comparisons

Medium Fidelity – Command Line

```
1 function [motorSpecs,batterySize,legLengths] = modelQuadruped(speed,payload,runTime, numberOfLegs)
2 % Model-Based Systems Quadruped
3 % This function accepts inputs from the user that define general robot
4 % characteristics and performance specifications. It uses those equations
5 % and relevant equations, such as the torque at the end of a moment arm,
6 % to determine the critical targets, such as required torque and speed.
7 %
8 % The below equations are not accurate robot models and are only used for
9 % demonstrative purposes.
10 motorSpecs = 4*speed + 3*payload + 2*runTime + 1*numberOfLegs;
11 batterySize = 0.5*motorSpecs;
12 legLengths = [5*motorSpecs, 3*batterySize];
13 end
```

Command Window
ft >>

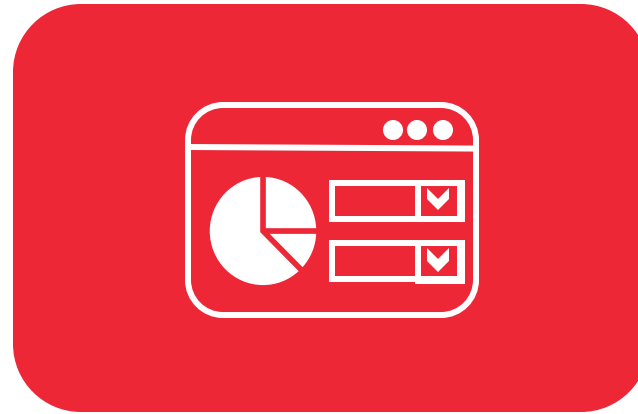

MATLAB command line

MATLAB function called from the command line with results shown as graphs/text

High Fidelity

MATLAB to
Simulink

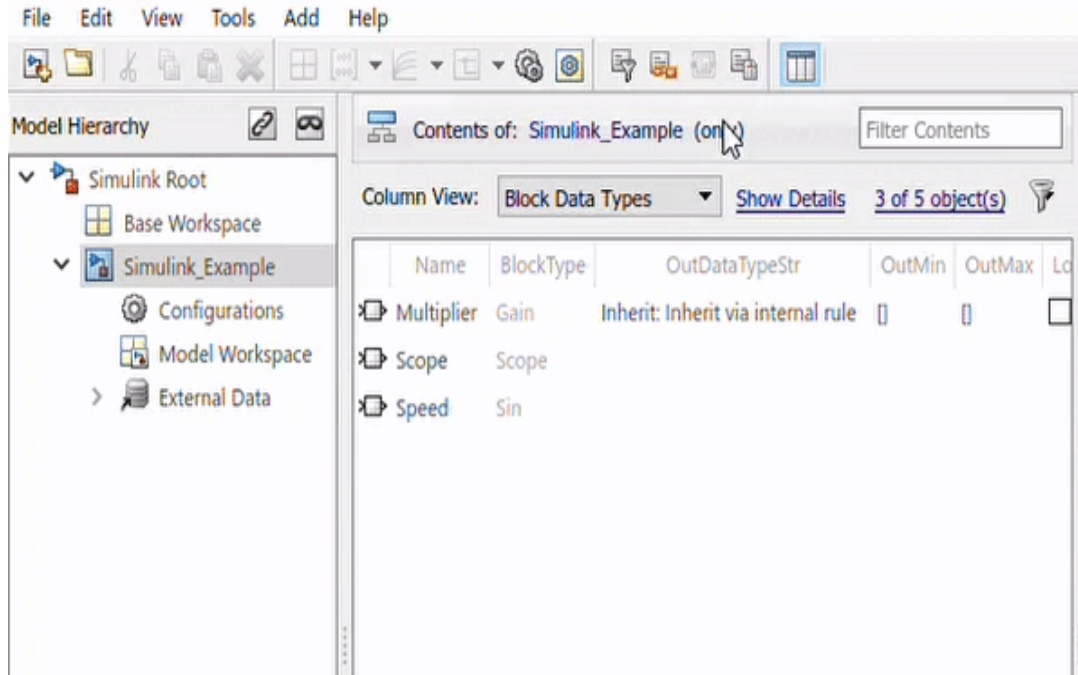

MATLAB GUI
with Dropdowns

System
Composer GUI

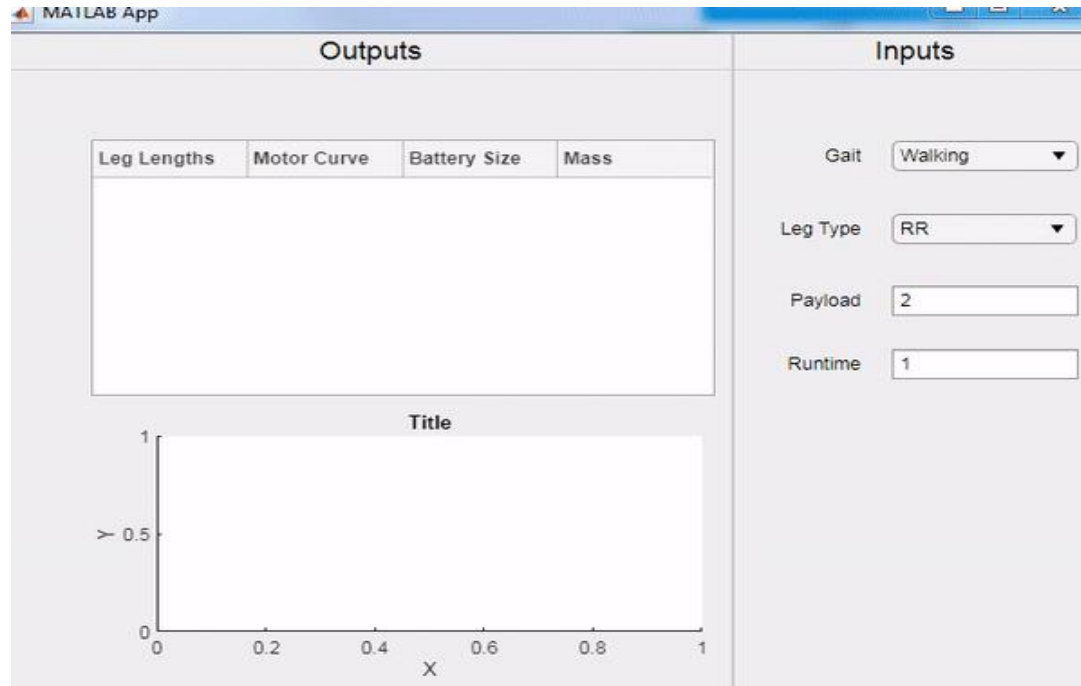

High Fidelity – MATLAB to Simulink

MATLAB to
Simulink

Custom MATLAB variables which affect a running Simulink model

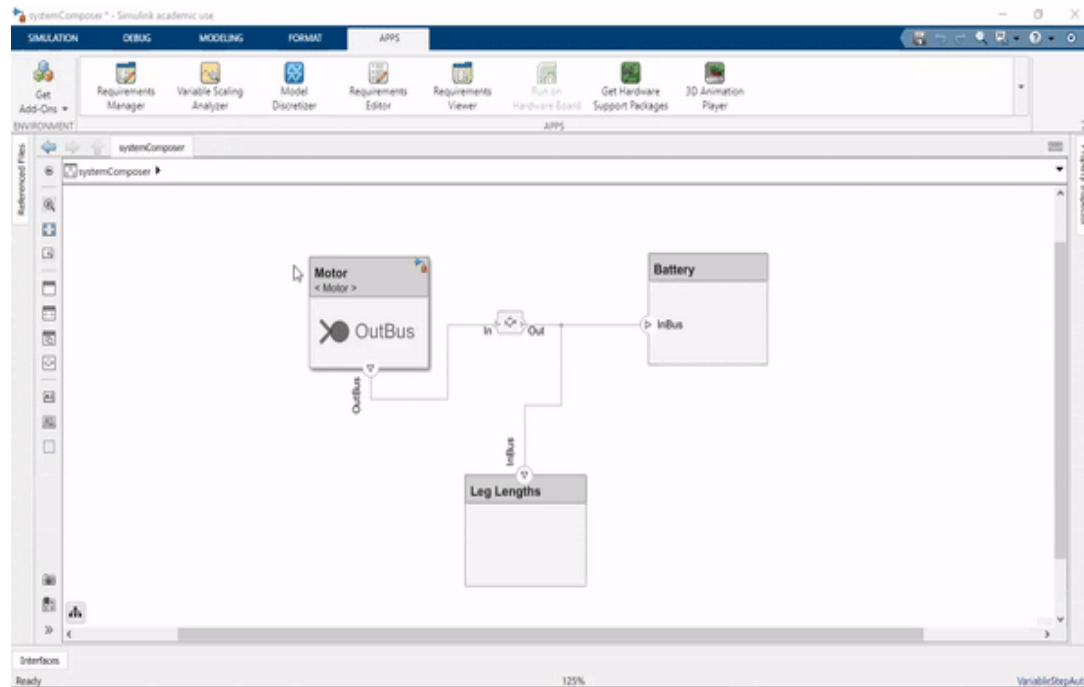

High Fidelity - Dropdowns

MATLAB GUI
with Dropdowns

MATLAB GUI with dropdown inputs with clear, predefined options for robot features

High Fidelity – System Composer

System
Composer GUI

Comparative relations formed using user input functions and targets
