ME Teaching Faculty
Florida State University

Objective

The payload should collect liquid samples, prevent contamination, and store the samples safely.

An aerial photograph showing a vast expanse of ocean. The water is a deep, vibrant blue in the upper portion of the frame. A large, irregularly shaped area of the water has turned a deep, dark red, indicating a harmful algal bloom. The red area extends across the middle and lower portions of the image, with some lighter blue patches interspersed within it. The overall scene is a stark contrast between the healthy blue water and the toxic red water.

Harmful algae blooms are on the rise

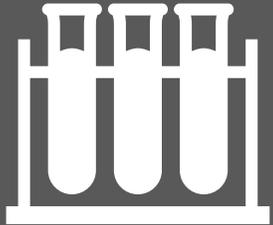

Devastated ecosystems

The benefit of using a drone

Distribution**

Concept Selection

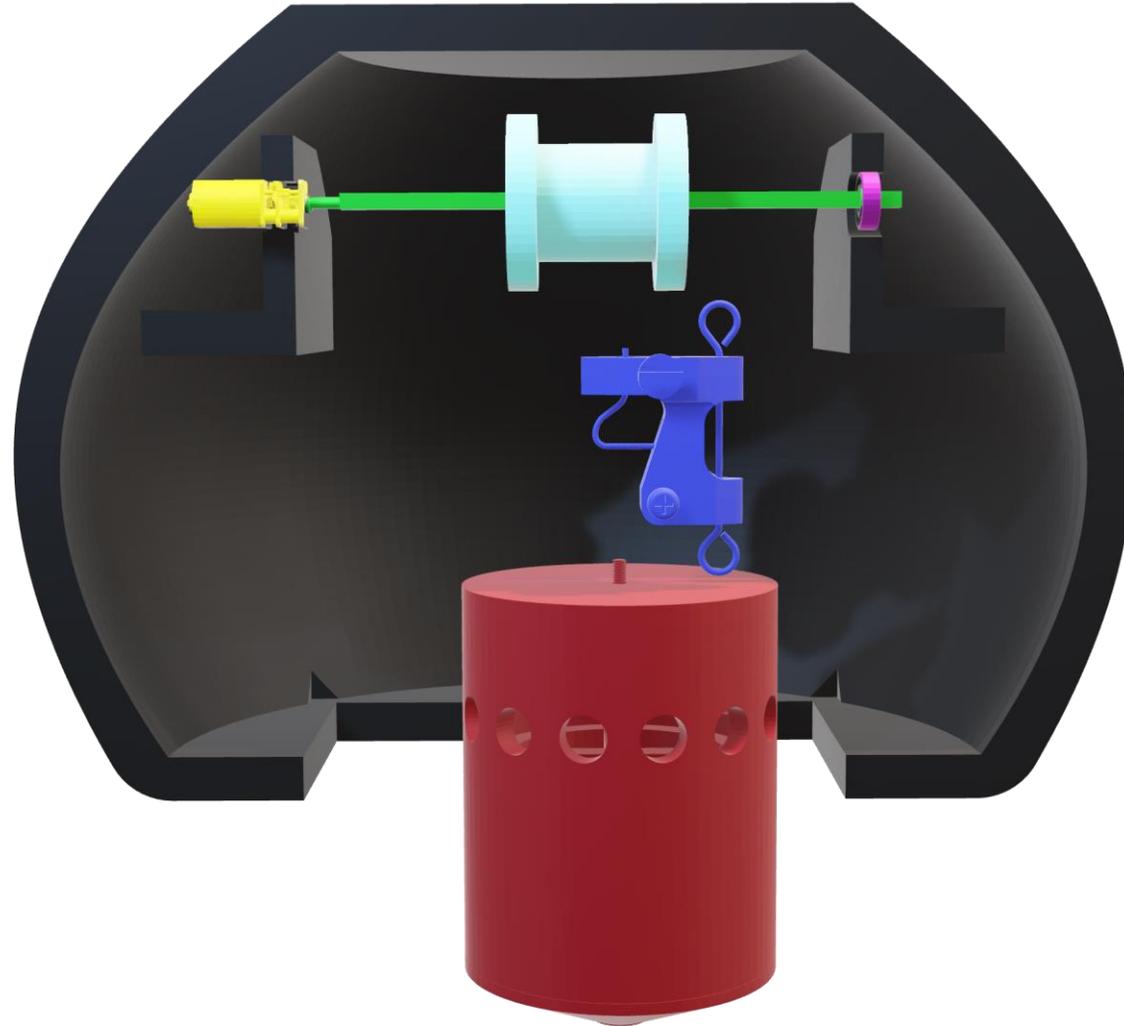

Multiple Rooms

- Can collect multiple samples
- Adjustable number of rooms
- Universal drone usage

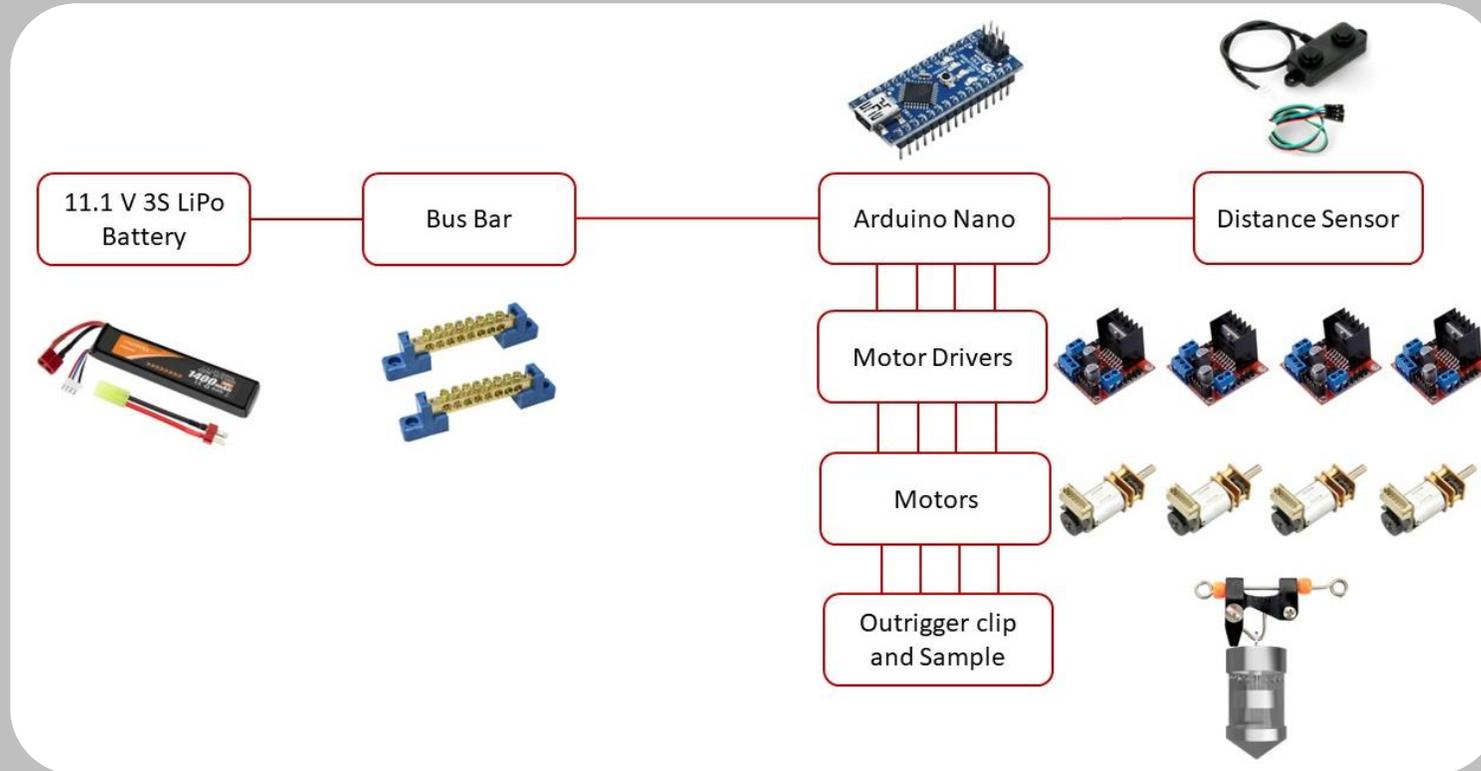

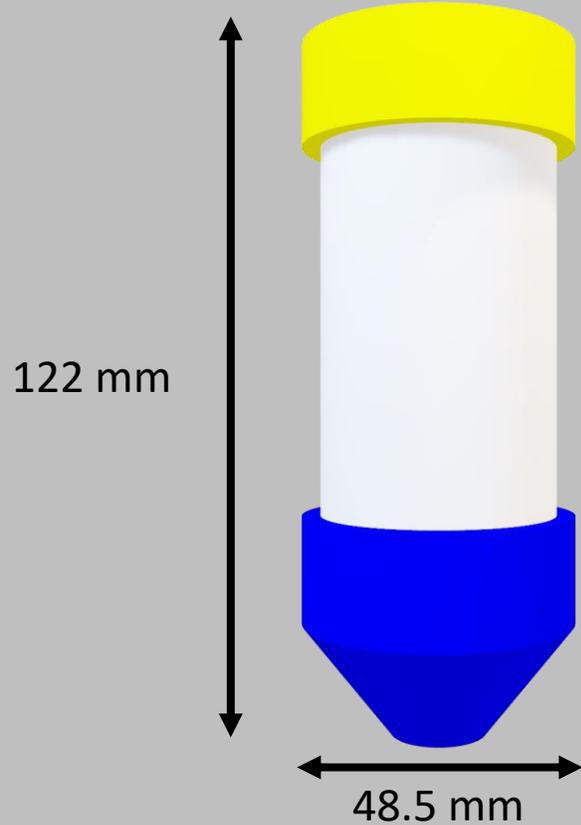

Mechatronic Diagram

Design #1 Dimensions

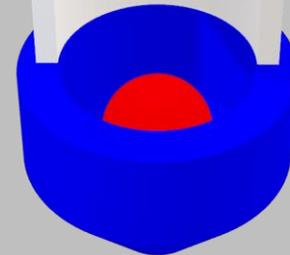

Design #1 Overview

One way cap doesn't let solids in

Marble/rubber ball plugs hole

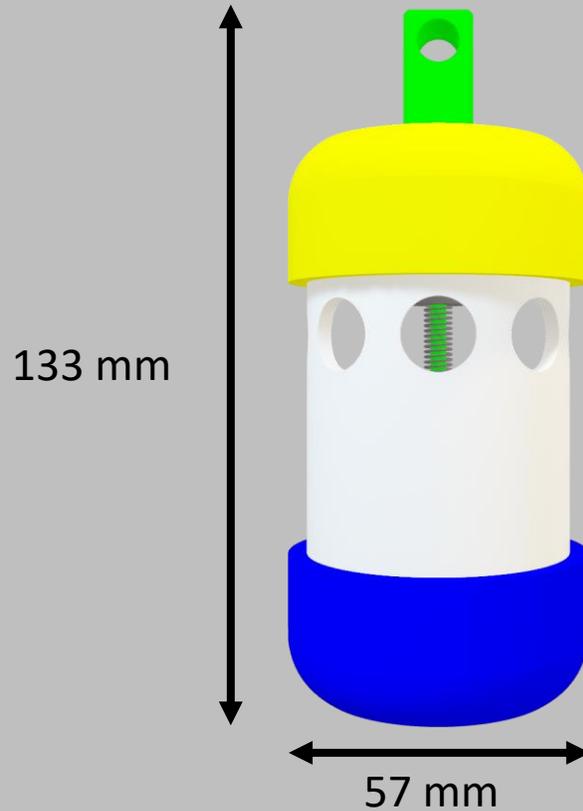

Funnel prone to leaking

Design #2 Dimensions

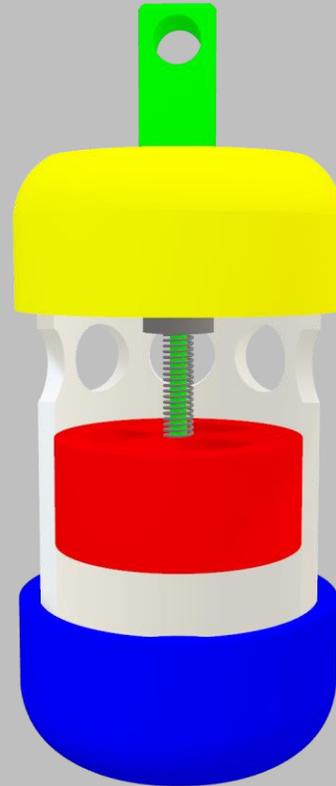

Design #2 Overview

Connects to outrigger clip

Spring compresses to seal

Smooth lid press fit

Holes allow water and algae inside (~80-90 mL)

Plunger allows water in from top but seals side

Design #3 Dimensions

95 mm

70 mm

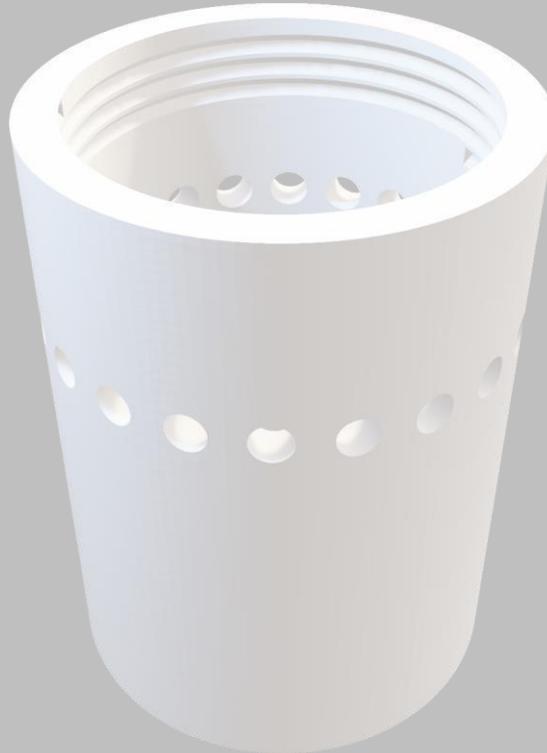

Design #3 Overview

Threaded ends allow for
screwed caps

Clear cast acrylic holds
~150-160 mL

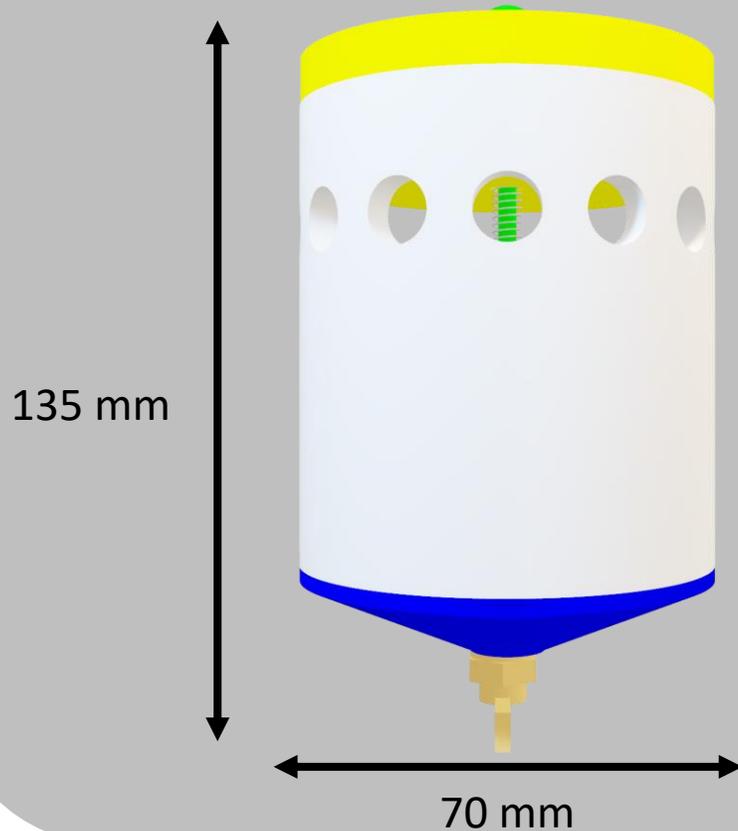

Smaller holes to increase
wall strength

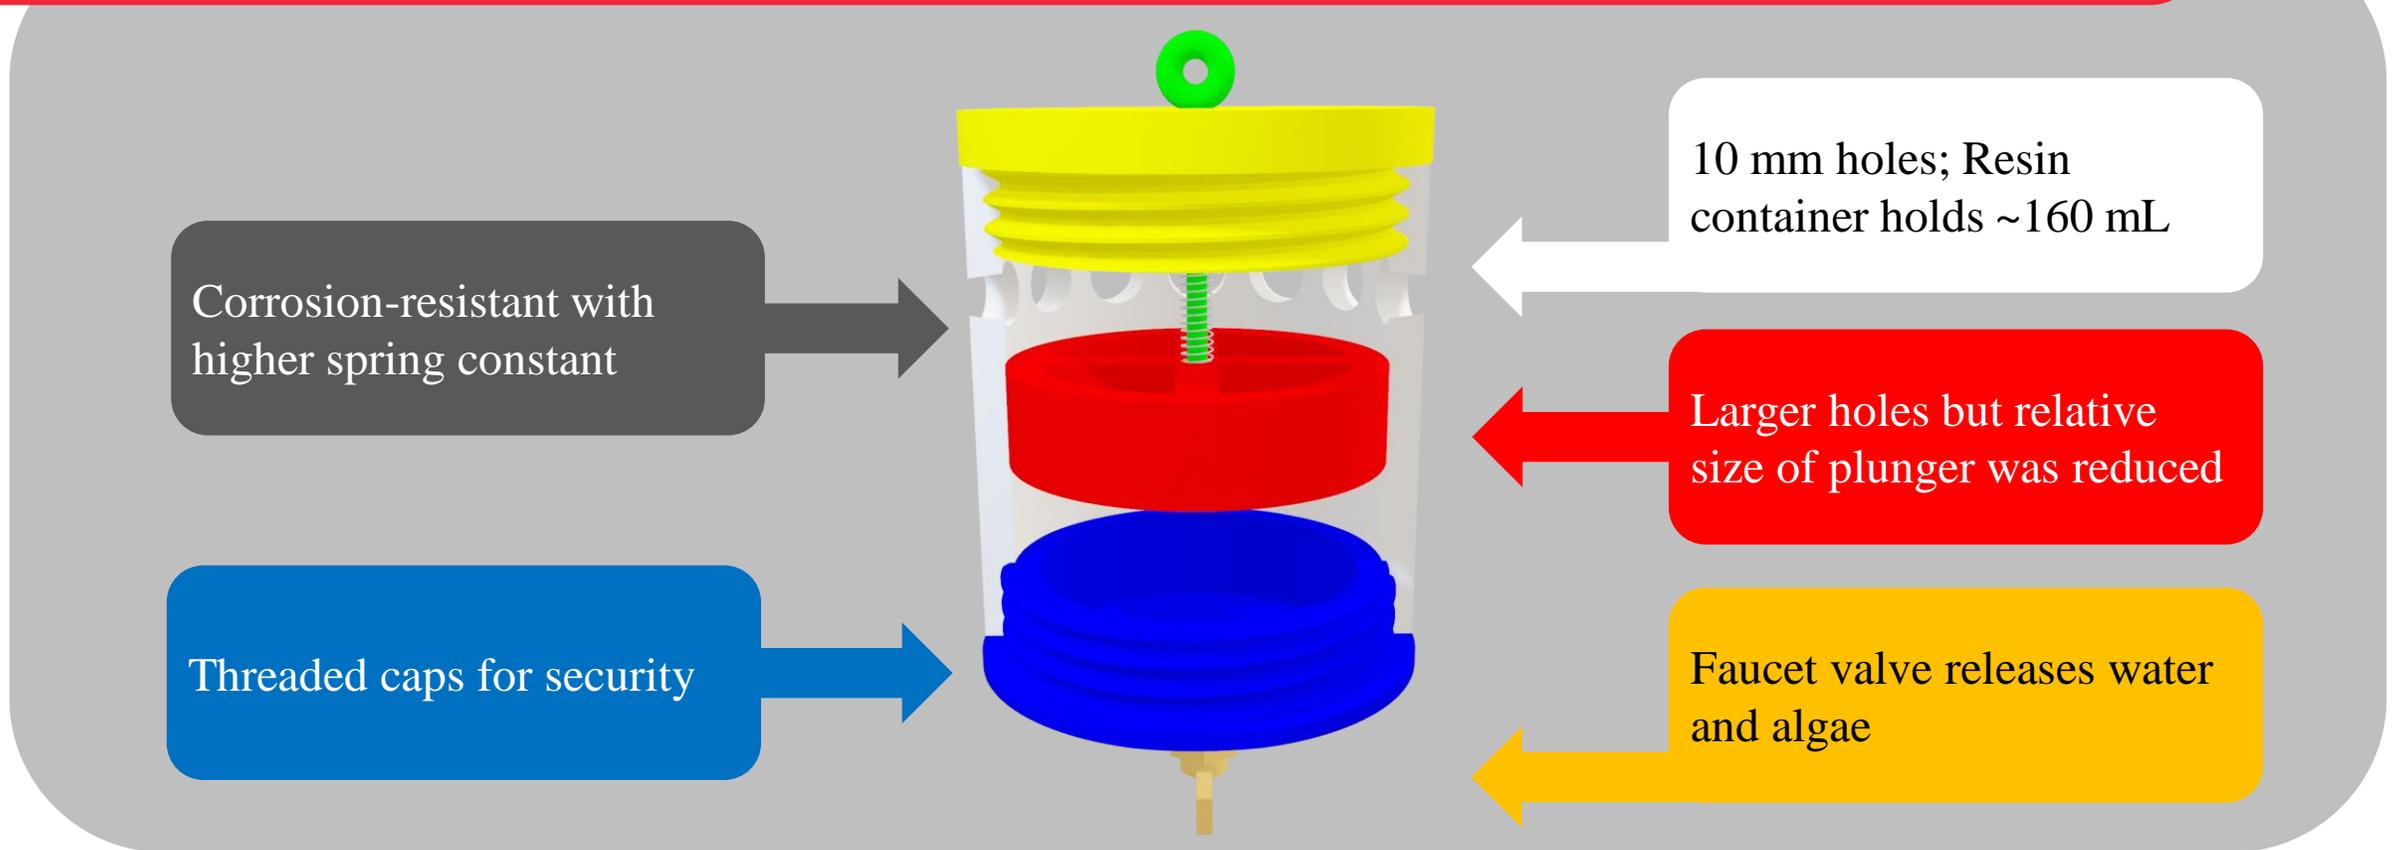

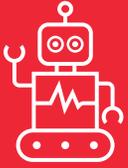

Current Design Dimensions

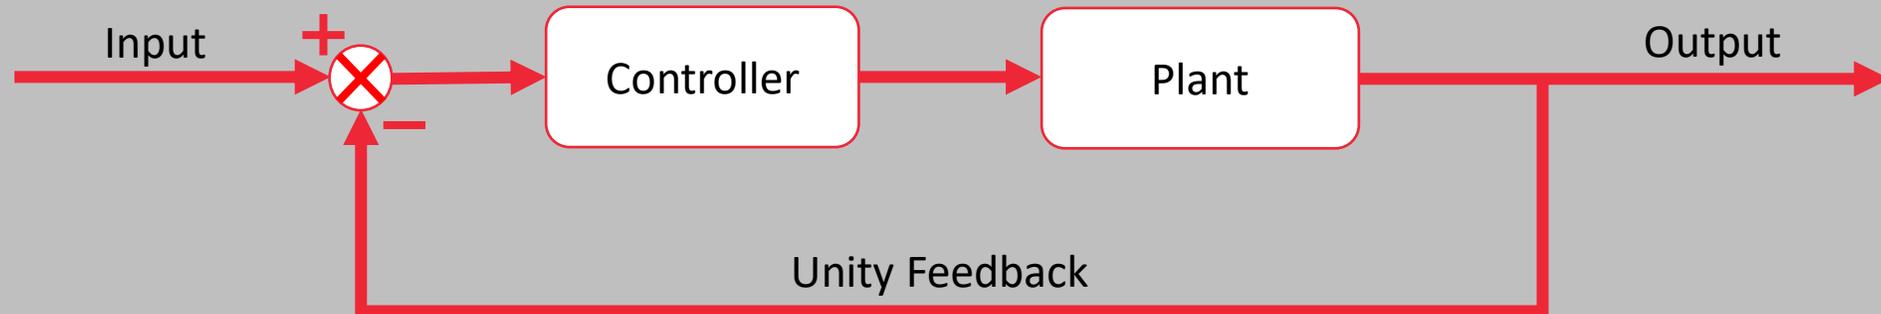

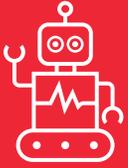

Current Design Overview

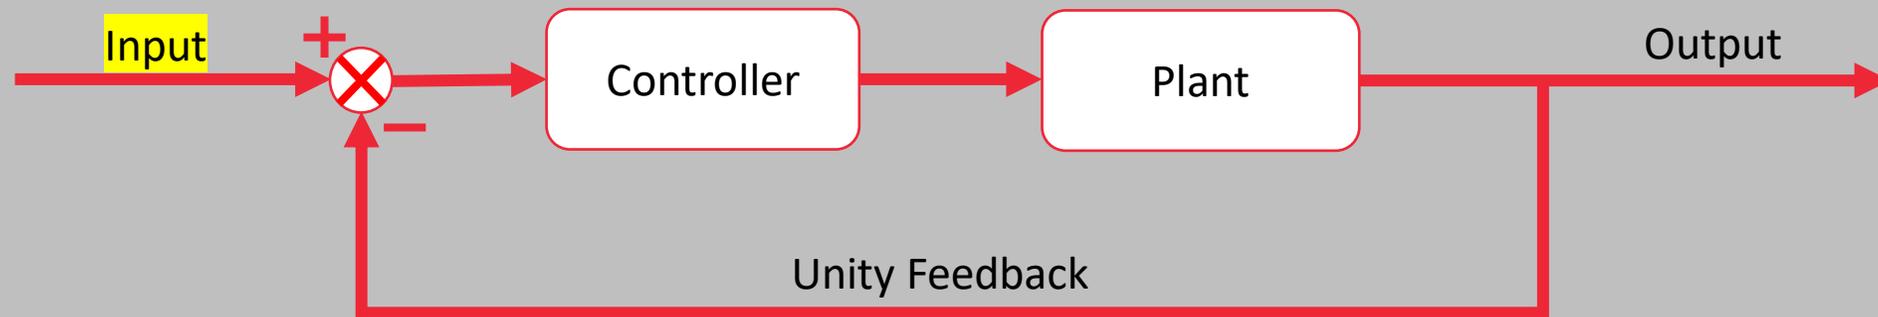

Mechatronics and Controller

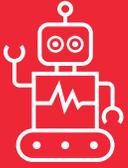

Mechatronics and Controller

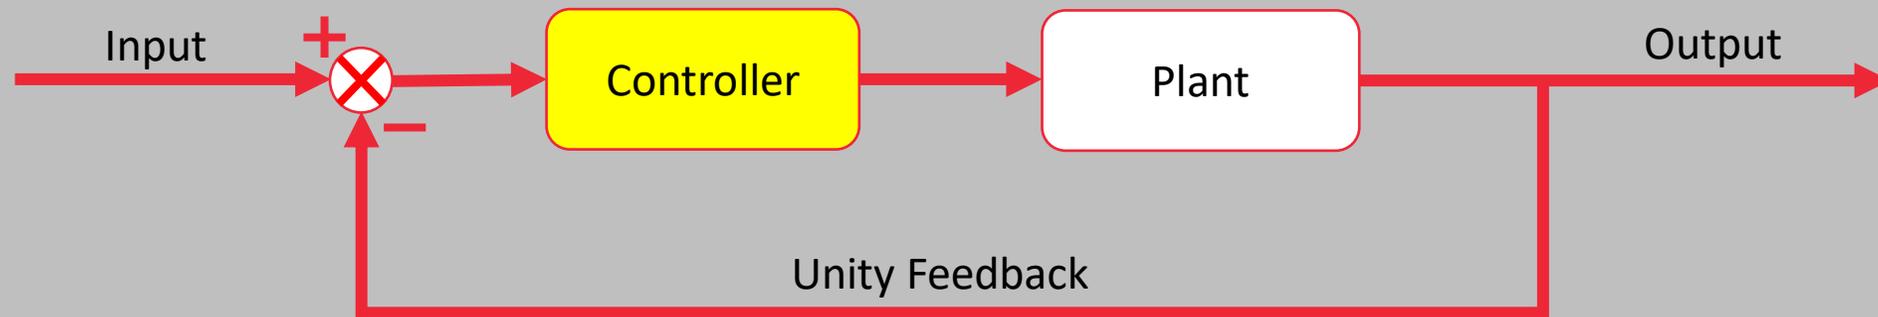

- Sensors communicate distance to water
- Arduino converts distance to encoder steps

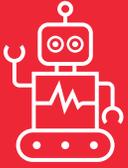

Mechatronics and Controller

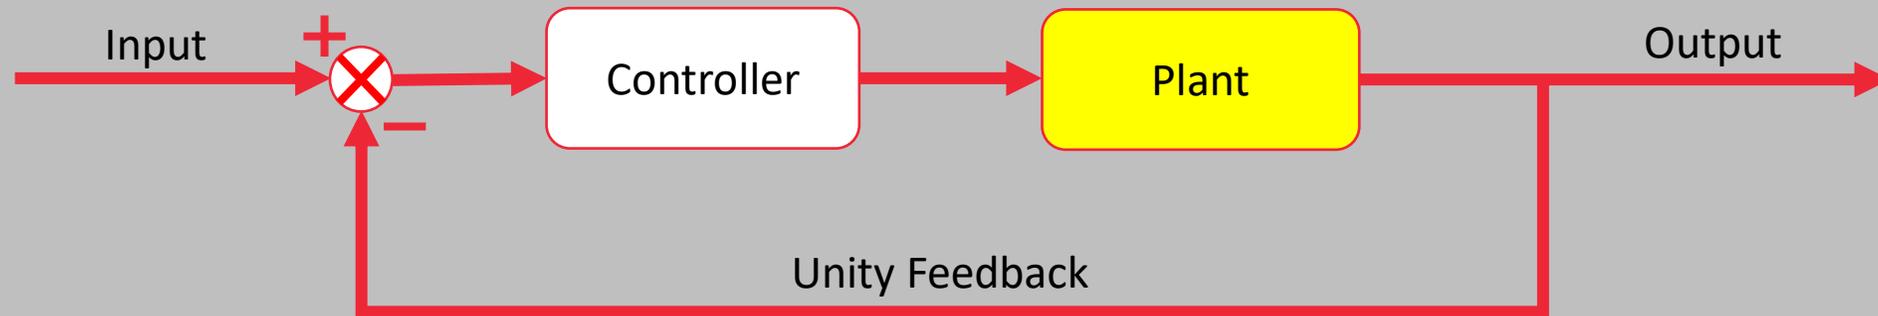

- Proportional Derivative Controller
- $K_P = 1, K_D = 0.025$

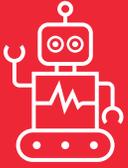

Mechatronics and Controller

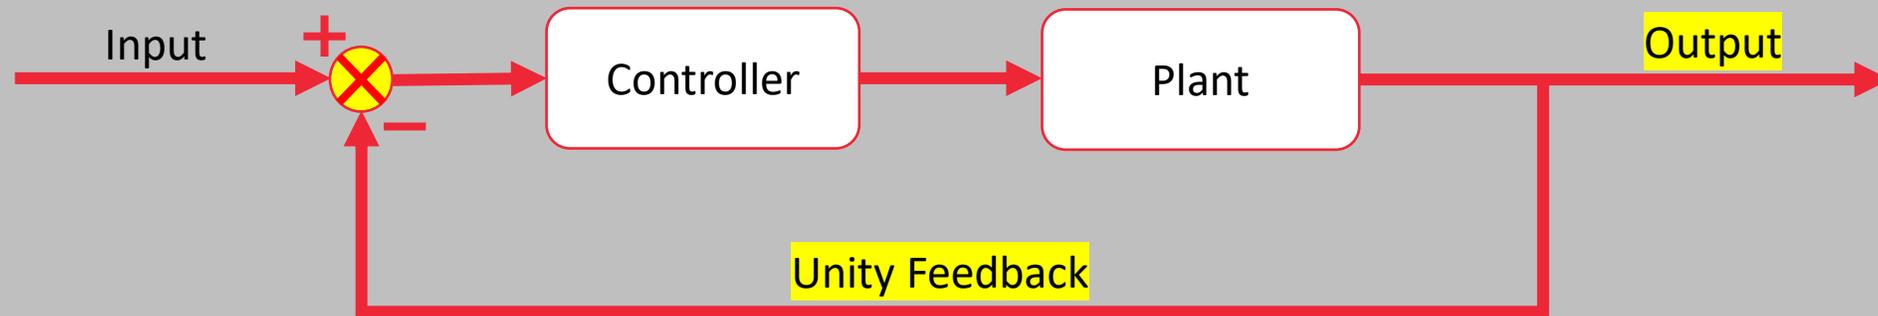

- DC micro motor, GR: 236:1
- Hall effect encoder with 5320 resolution

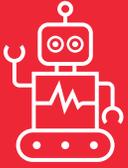

Mechatronics and Controller

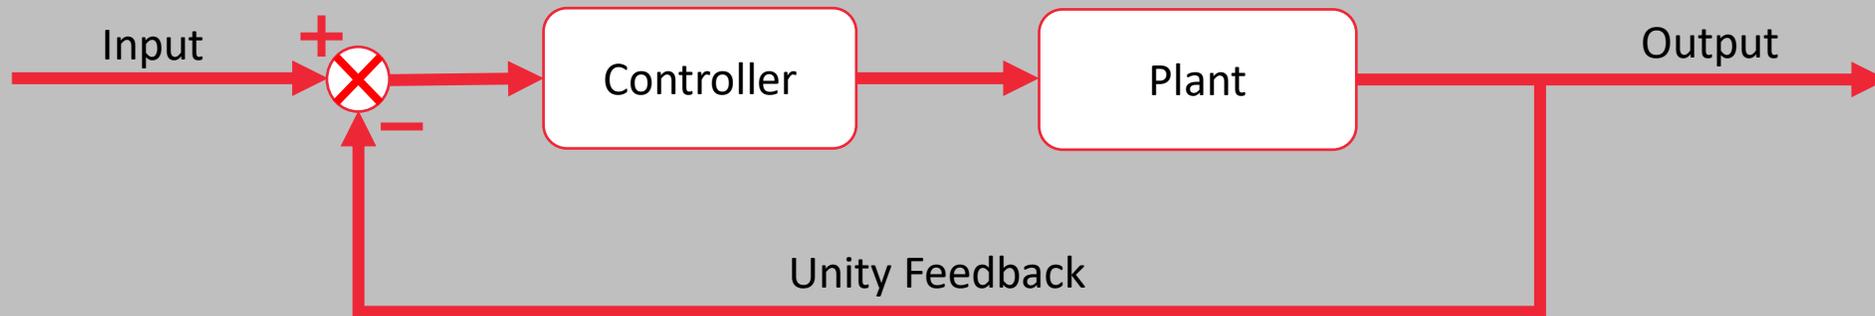

- Output is duty cycle sent to motor
- Feedback is sent to summing junction
- Error is calculated and PD controller takes effect

Mechatronics and Controller

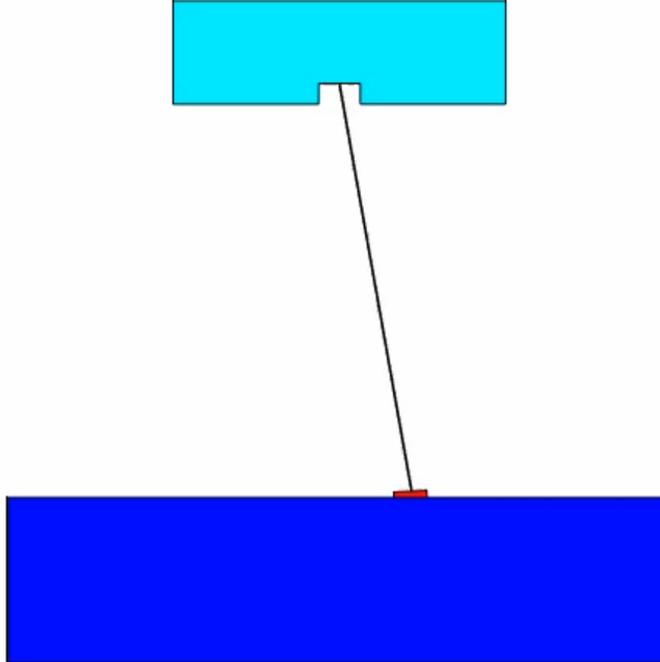

- Averaging less than 1% of error
- This translates to 50 encoder steps
- With current spool diameter, the error is 1.5 mm

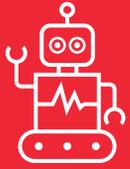

Simulations

Drone Payload Sample and Collection Work Breakdown Structure

Refined Storage Prototype

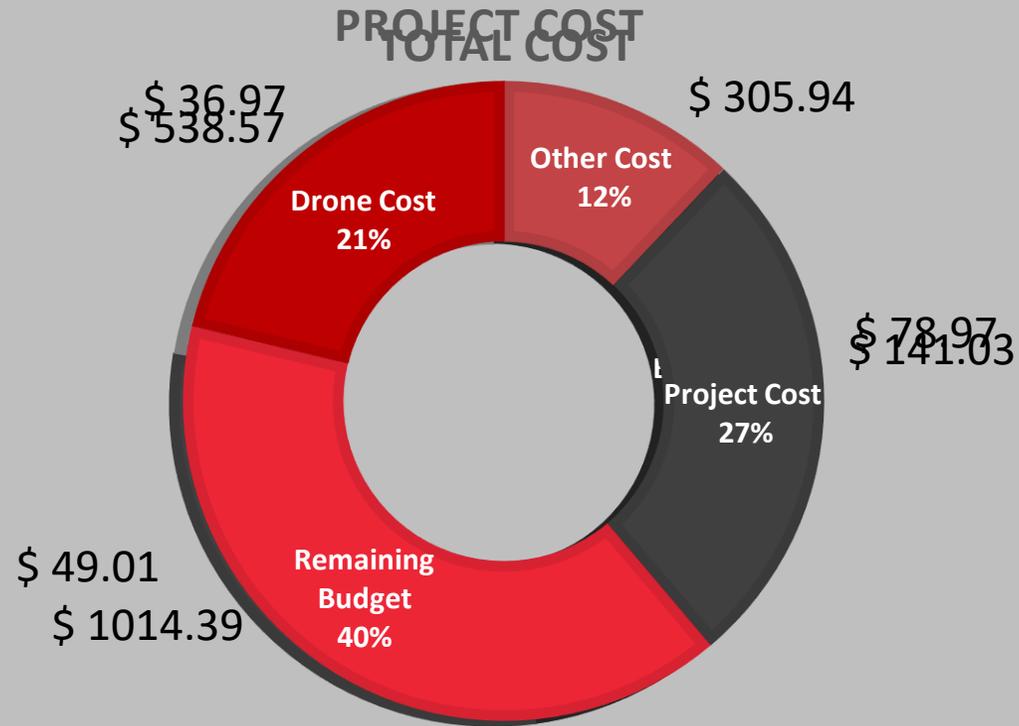

- 3D Print housing
- Assemble housing
- Mount housing to drone body

Design Review 6

- Assemble all components
- Integrate flight controller with Arduino
- Completed Testing

Current Design Overview

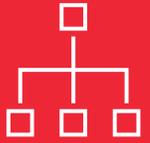

- Material: Resin
- New Features:
 - 0.4 inch diameter holes
 - Faucet valve
 - Functional threading
 - Stronger spring constant
- Weight: 240 g (empty)
- Collection Capacity: 160 mL (~1
