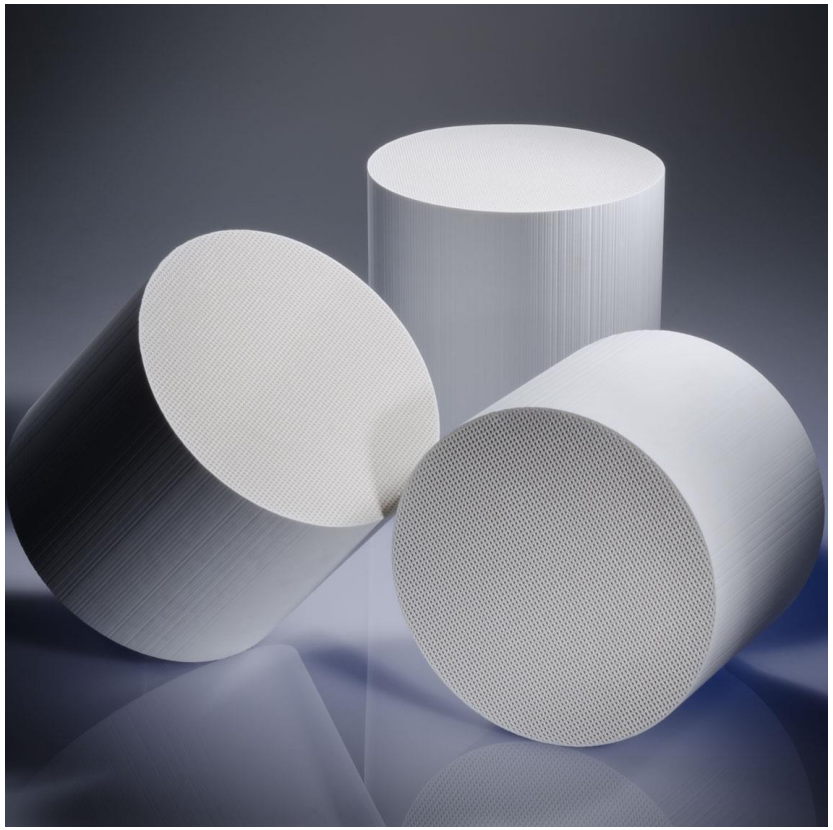
Objective

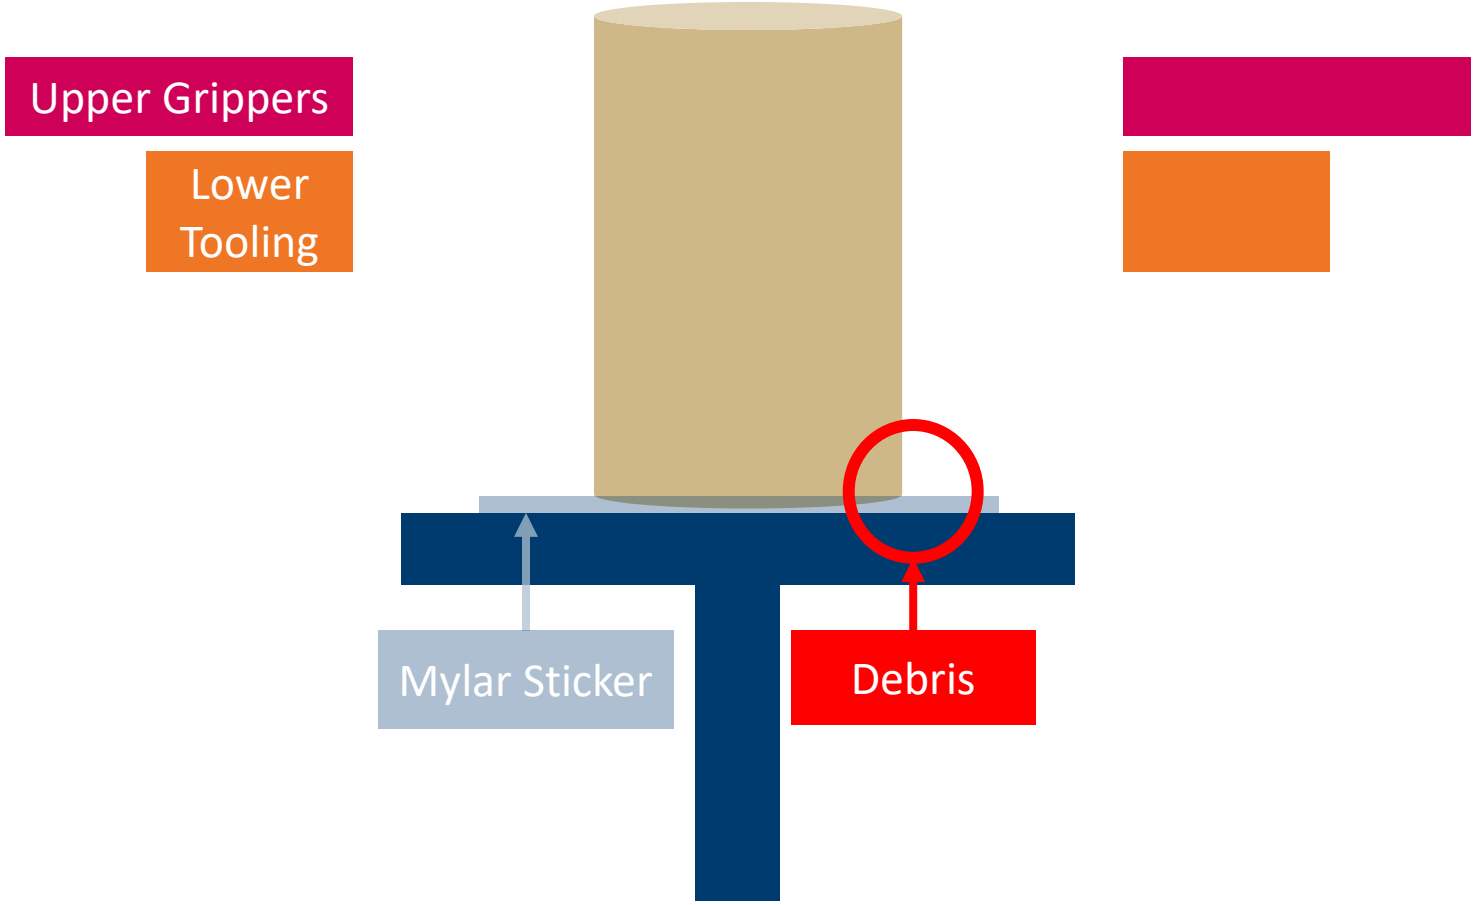
The objective of this project is to mitigate debris on the mylar sheet during the justification process by reducing the area in which debris can fall.

Background

- Diesel Particulate Filters(DPFs) are used to filter diesel exhaust gasses.
- Made of an extruded cellular ceramic material.
- Cement is pumped in from both sides to plug alternating holes and create forced airflow through the porous ceramic



Project Summary

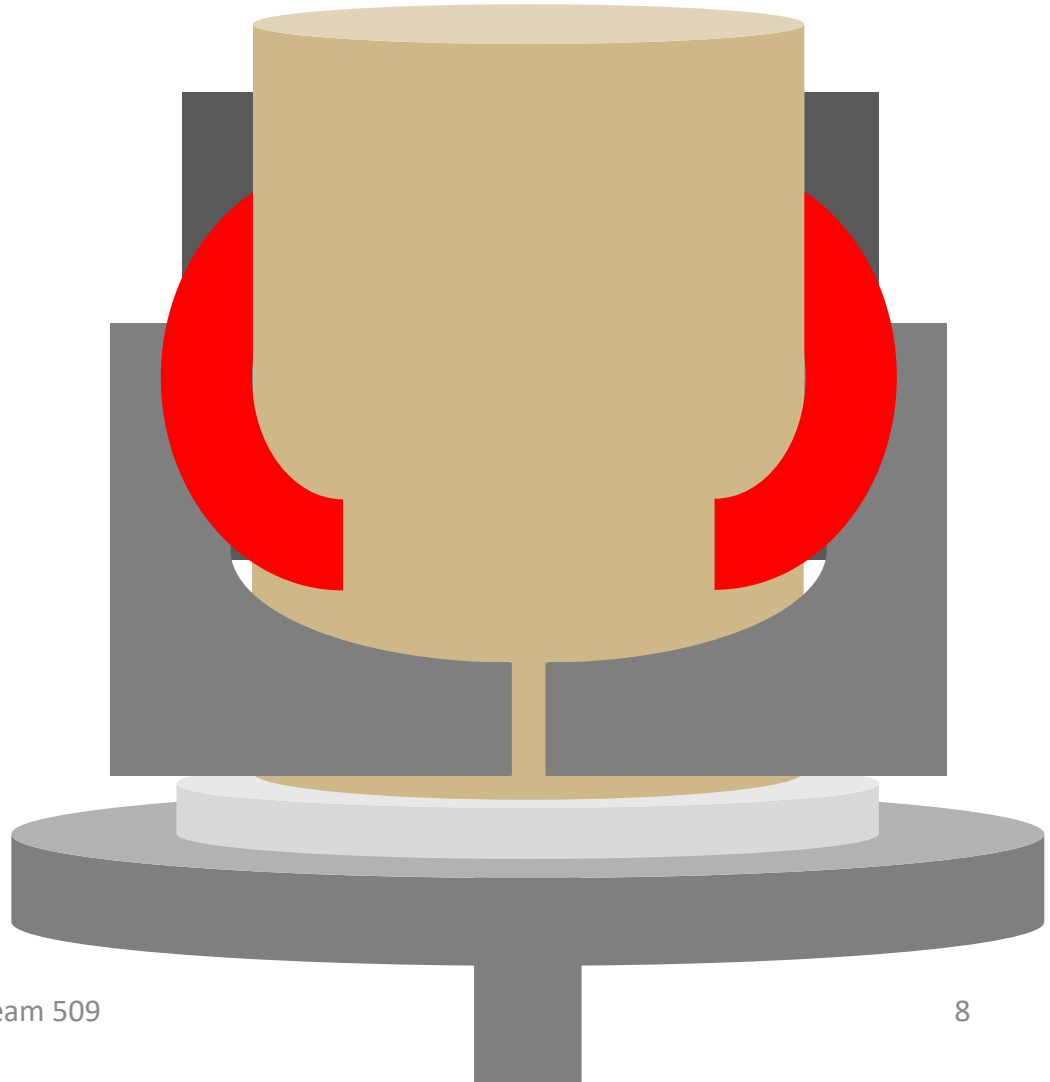


FAMU-FSU College of Engineering

Key Goals and Targets

FAMU-FSU College of Engineering

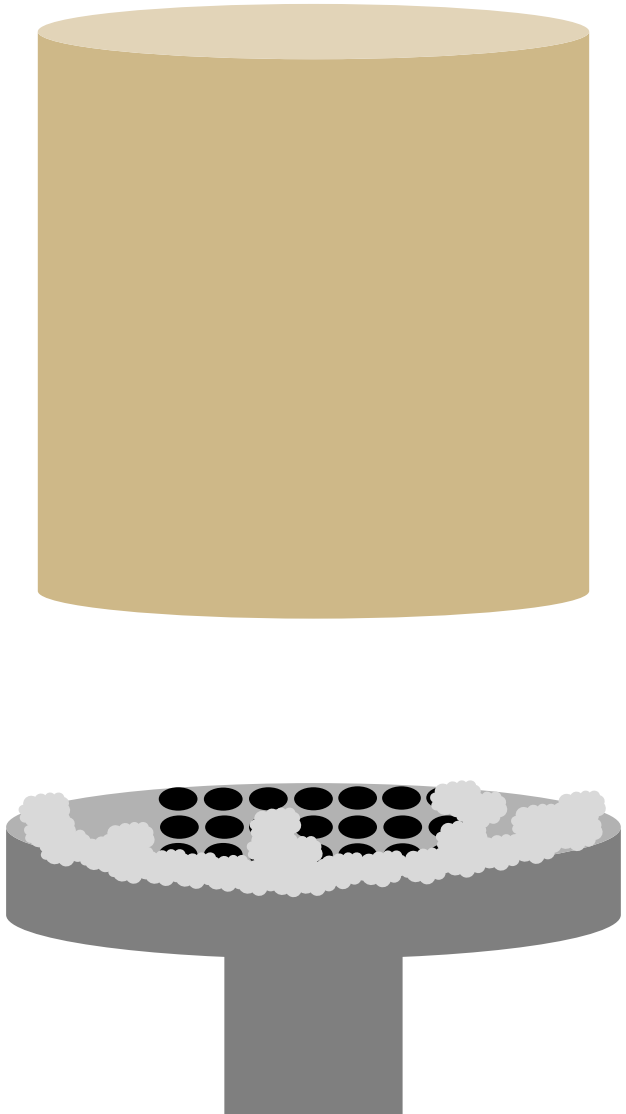
Prevent Debris on Mylar



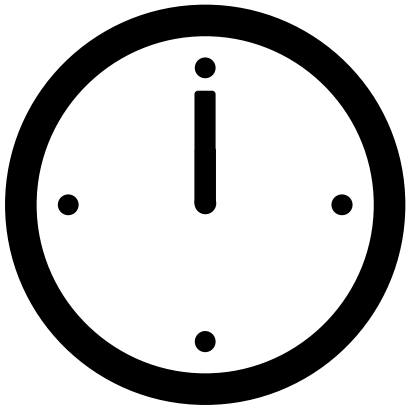
Reduce from 0.8 g to 0.4g of debris

Reduce Filler Waste

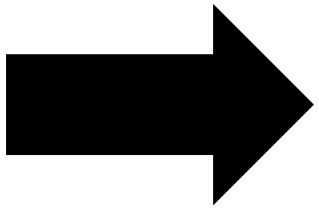
Reduce number of parts fixed per day from 150 to 50 parts

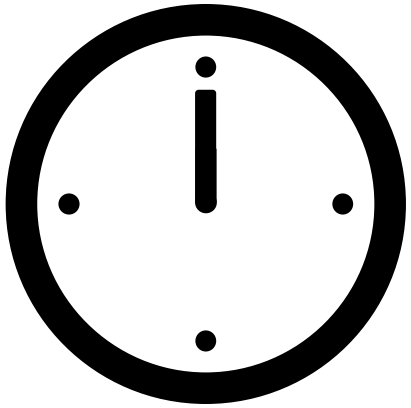


Reduce Downtime



27 Hours





9 Hours

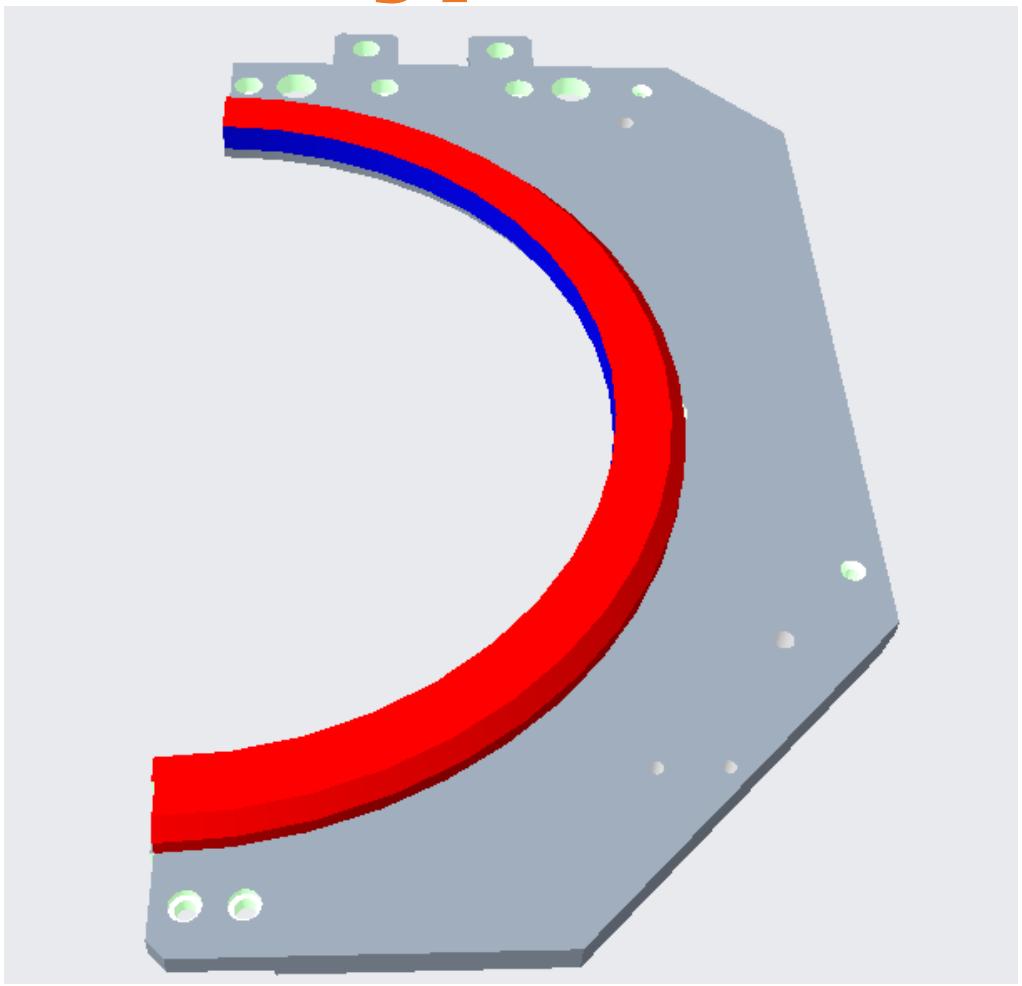
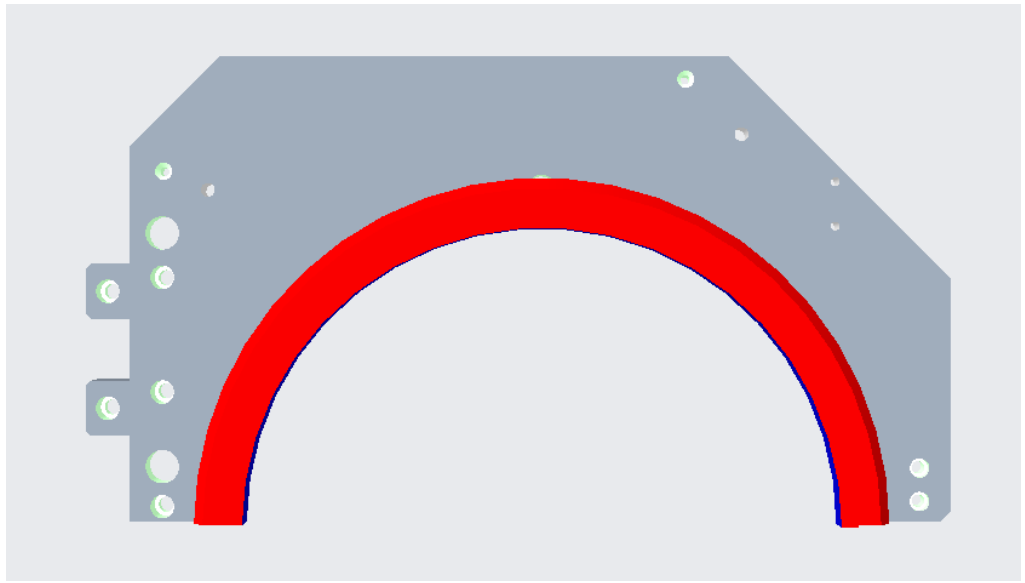
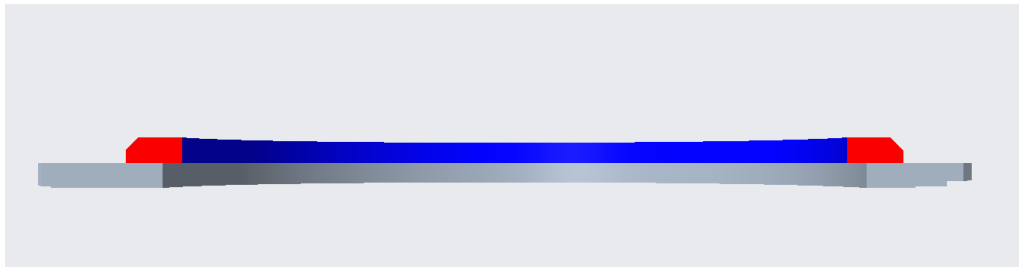
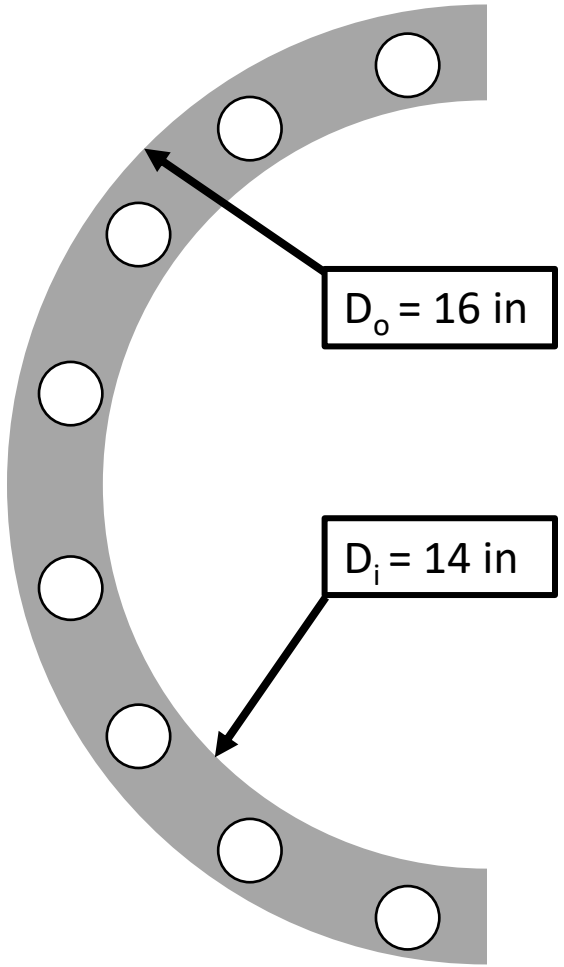
Prototype

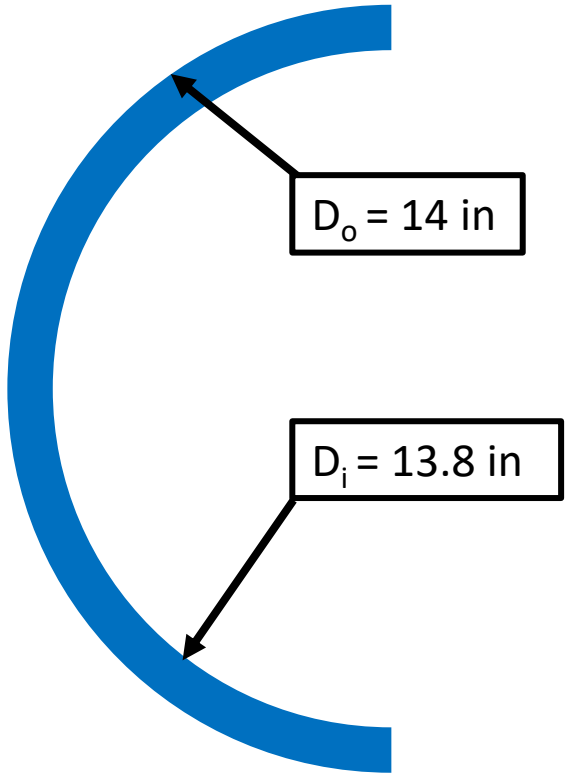


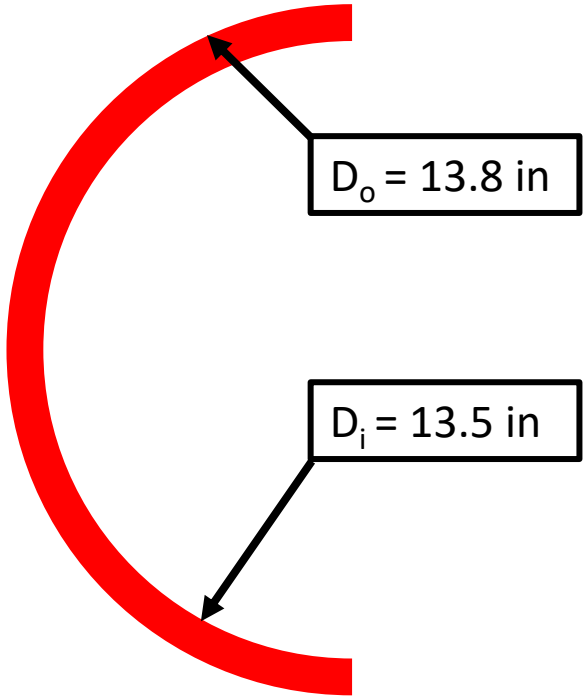




Specifications





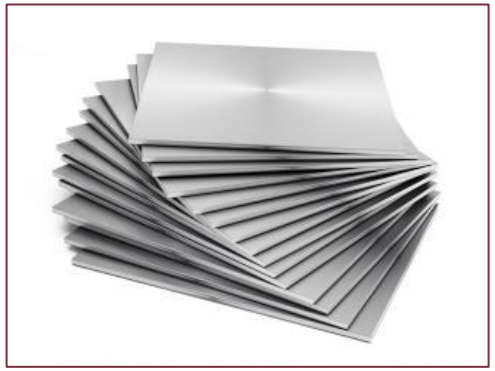


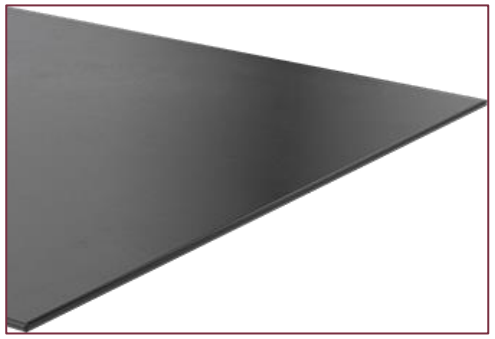
FAMU-FSU College of Engineering

Material Selection

6061 Aluminum

- Ease of machining
- Lightweight
- Strong for application





40 OO Rubber

- Desired durometer
- Soft medium

Material Selection

UHMW

- Low friction value
- Abrasion resistant
- Used by Corning

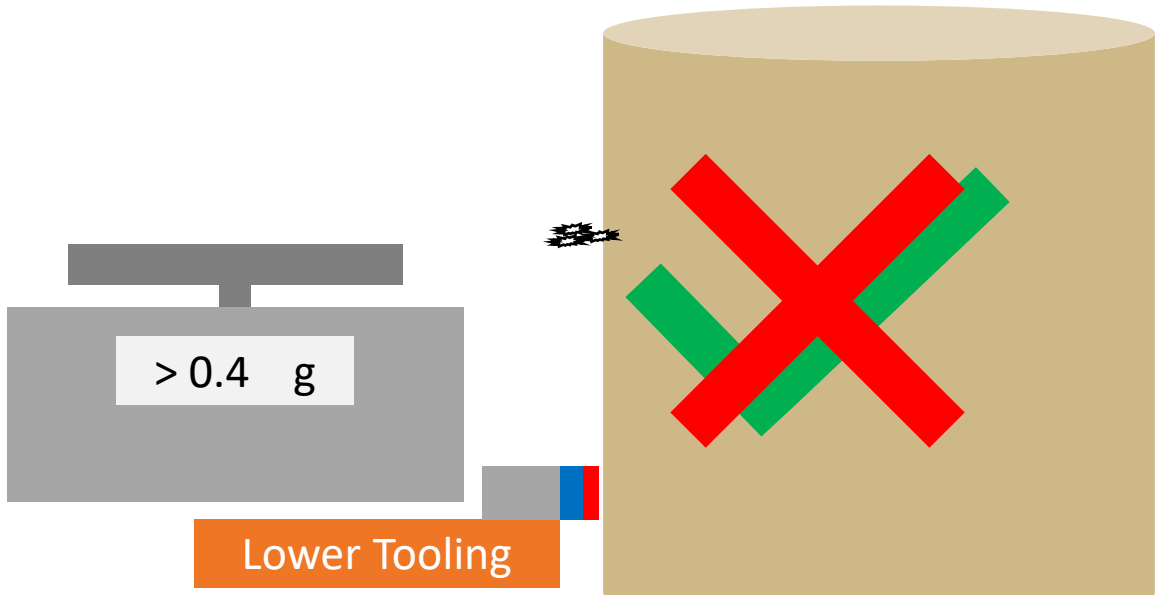
Acrylate Adhesive

- Low Cost
- Bonds well with materials used

Testing

FAMU-FSU College of Engineering

Debris Test



FAMU-FSU College of Engineering

Debris Test Results

Right Test:
Dropped 0.89 g of debris
Goal: < 0.4 g
