JTEKT Bearing Painter VDR 1

Senior Design Team 515

Team Introductions

Mason Gibson
*Manufacturing
Engineer*

Wesley Jean-Pierre
*Mechanical Design
Engineer*

Max Jones
*Project Manager &
Control Engineer*

Andrew McClung
*Systems Integration
Engineer*

Anthony Wuerth
*Manufacturing &
Design Engineer*

Sponsor and Advisor

Engineering Mentor
Joshua Jones
Process Engineer
JTEKT North America

Academic Advisor
Shayne McConomy, Ph.D.
Senior Design Professor

Project Objective

The objective of this project is to automate the process of painting needle bearing retainers.

Project Background

Anthony Wuerth

Needle Roller Bearings

Used in:

- Transmissions
- Engines
- Suspension
- Aviation
- Aerospace

Needle Roller Retainers

Used to Hold Needles in Place:

- Cylindrical Rollers
- Higher Max Loads
- Rotation Must be Constrained

Retainer Painting

Some Customers Require Part Marking To Help Distinguish Similar Parts

- Low Production Runs
- Tedious, Manual Process
 - Operator Pulled From Position
 - Decreased Efficiency

Project Scope

Max Jones

Key Goals

Accurately Apply
Metal Paint to
Bearing

Accommodate a
Wide Range of
Bearings

Automate Bearing
Painting Process

Assumptions

Manually Loaded and Unloaded

Loaded with One Type of Bearing
at a Time

Powered by a Standard 120V
Wall Outlet

Paint With one color per Load

Markets

- Primary
 - JTEKT
- Second
 - Industrial Manufacturing Plants
 - Mass Production Industries
 - Automotive Industries

Stakeholders

- JTEKT
- FAMU-FSU College of Engineering

Customer Needs

Max Jones

Customer Needs

Fully Automated

Fit Into Existing Fume Hood

Accommodate Different
Sized Bearings

3 Second Cycle Time

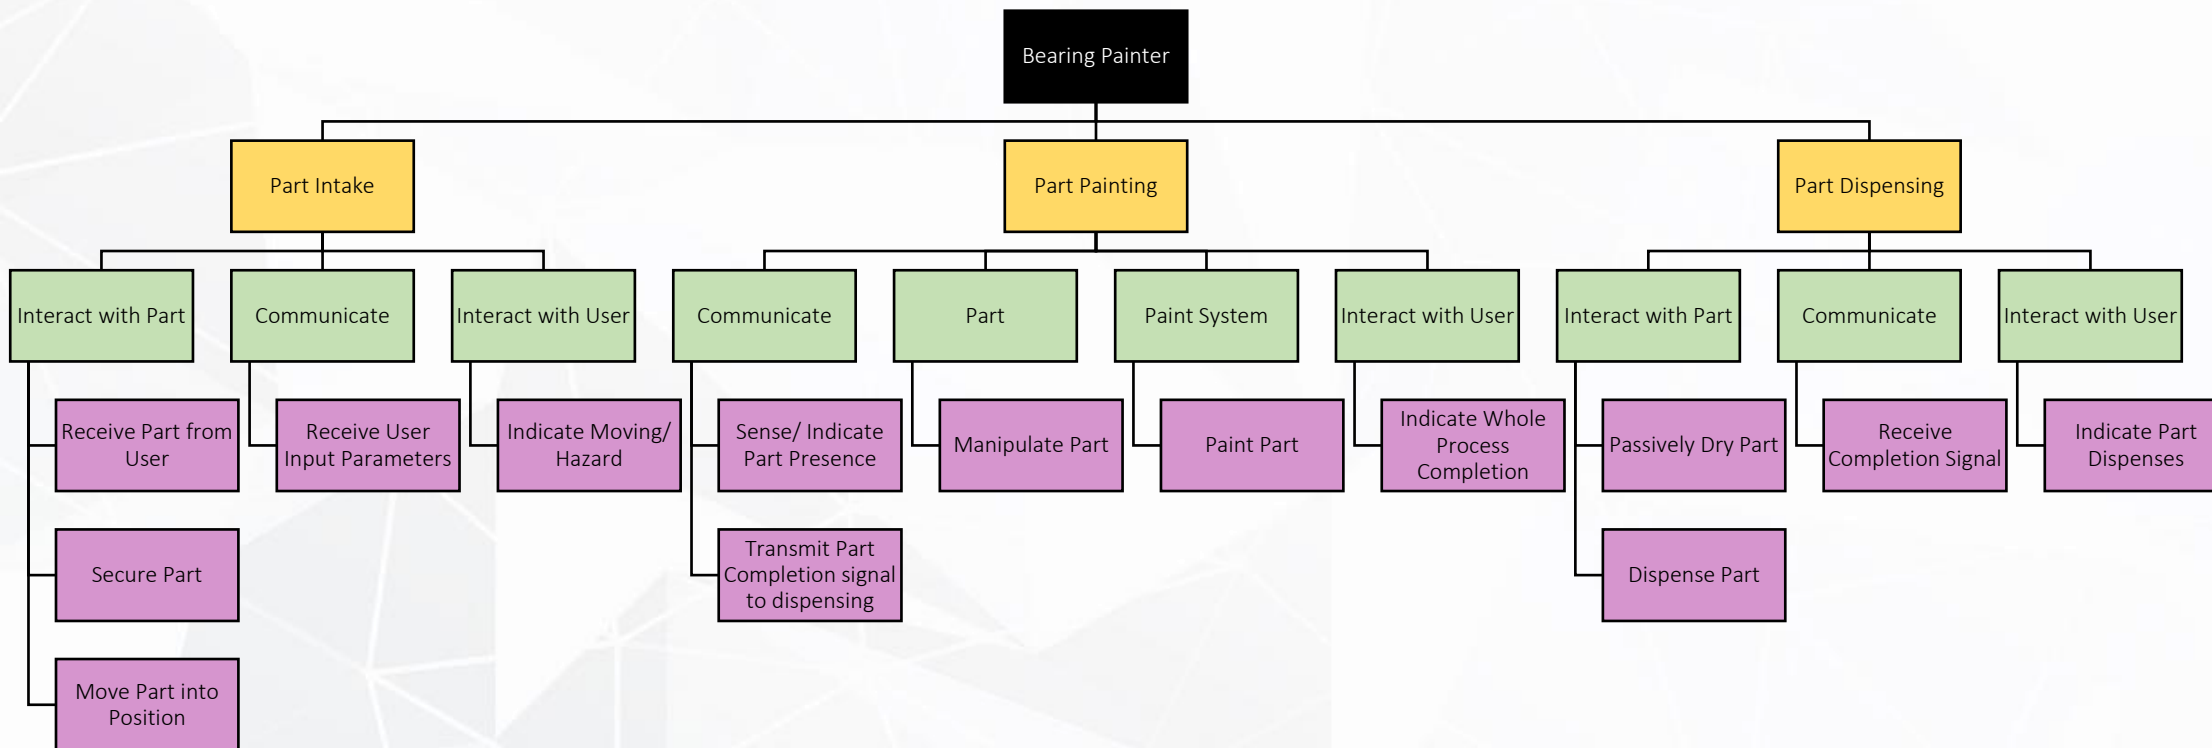

Paint Non-Working Surface Only

Functional Decomposition

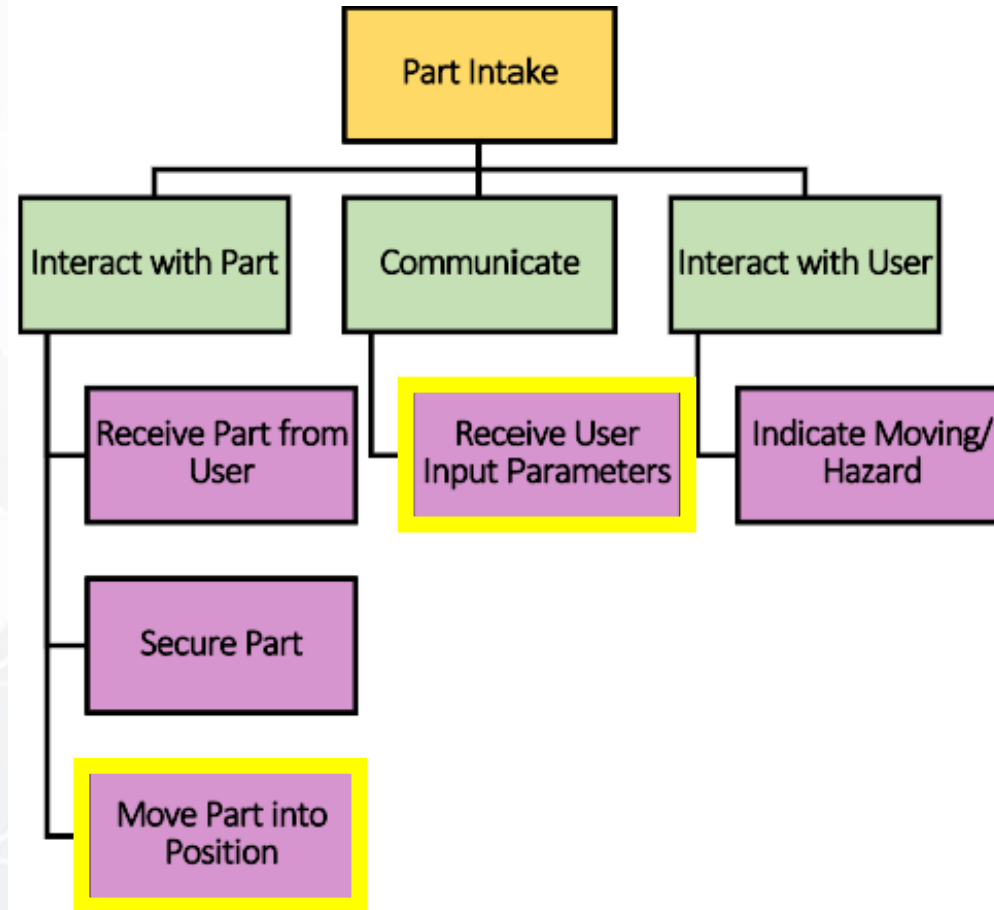

Max Jones

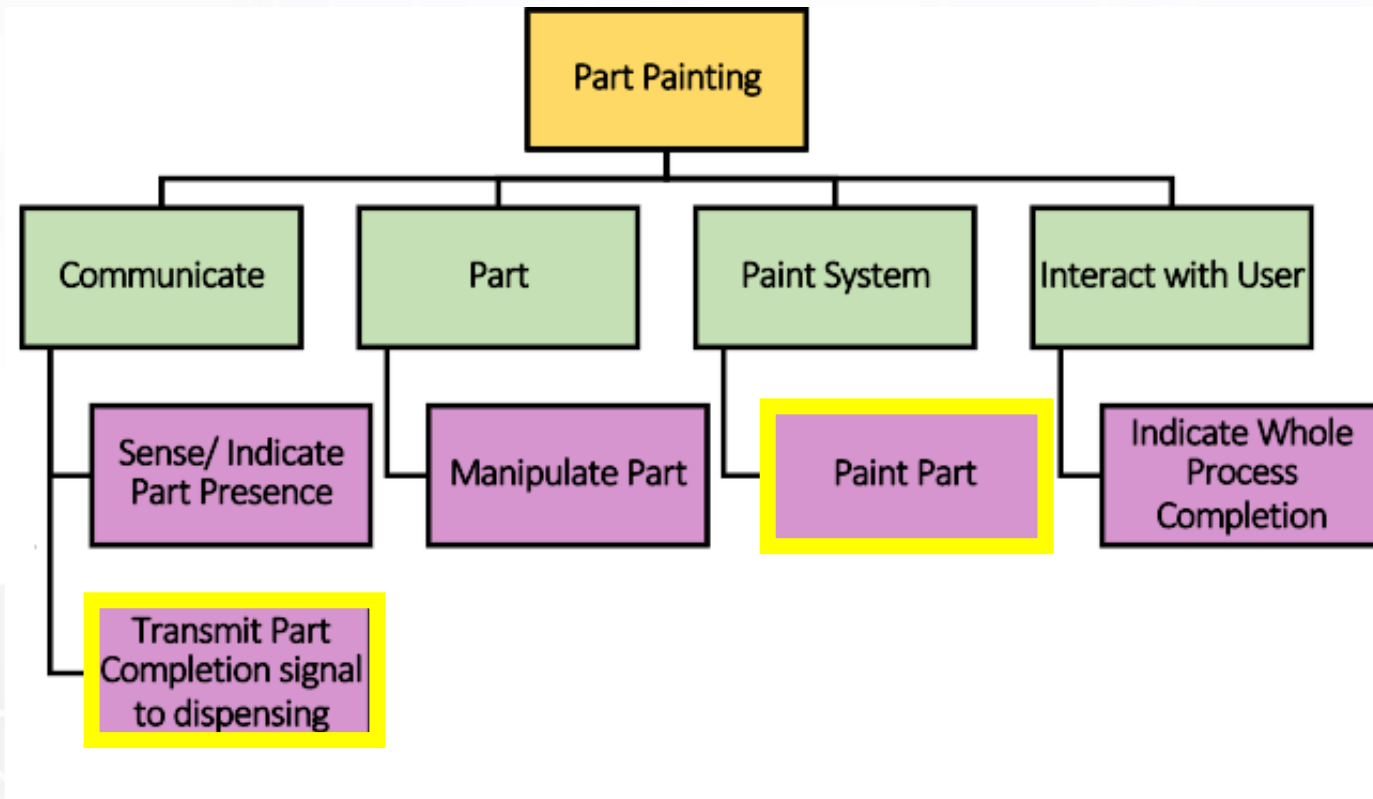

Functions Hierarchy Chart

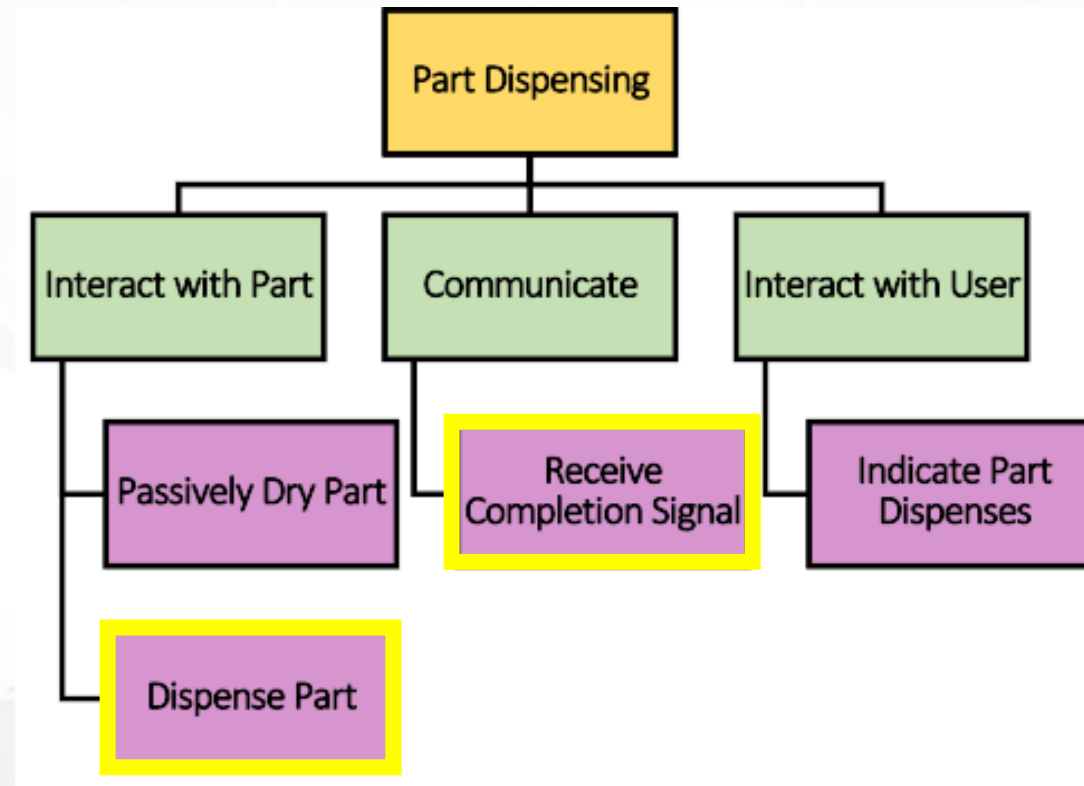

Part Intake

Part Painting

Part Dispensing

Future Work

Testing With DYKEM

Concept Generation & Selection

Prototyping
